PROJECTS

➤ ONLINE AUCTION SYSTEM

The purpose of this project is to build an "on-line auction system", A place for buyers and admin to come together and trade almost anything. This system is to allow users to show products and register to site and play auction to win product. Users can bid on a product and chances to win a product at the lowest price in the site.

Responsibilities:

- Involved in Design and development of the application.
- Involved in database creation. All the queries are managed through MySQL.

Main Features:

- List of Products.
- Product auction.
- Users make the lowest bid to product this would be the winner of the product.
- Admin can add/edit/delete products from backend.
- Admin can also modify the prices of product before auction.

Environment:

- PHP, JavaScript, Ajax, MySQL, XAMPP

➤ TRAVEL AGENT

Purpose of this System is to allow User to Search form different buses options for different destinations across India, Register, profile management, admin can Add, Modify, Delete Buses Options on the site, manage rate of Bus Trips and manage user.

Responsibilities:

- Involved in Design and development of the application.
- Involved in database creation.

Objective:

- To provide the facilities to the user to create their account and book the bus ticket.
- To provide the facilities to the admin to manage payment of booking and Maintaining agent information and managing users.

Main Features:

- Information about Bus Trips.
- Maintain Buses options and users.
- Payment in an Easy Way.

Environment:

- PHP, JavaScript, Ajax, MySQL, XAMPP
