SQL

EDUCATION

B-Tech in Computer Engineering

Parul Institute of Engineering and Technology
2021-2024

Diploma in computer Engineering

Parul Polytechnic Institute
2018 - 2020

LANGUAGES

English
Hindi
Gujarati
Sindhi

PROFILE

Passionate about coding with a penchant for quickly grasping new programming languages. While problem-solving might not be my strongest suit, my strength lies in adaptability and keen observation skills. Eager to apply my coding expertise and swift learning abilities to new challenges

WORK EXPERIENCE

Cloud Computing Intern

Eduversity   07/01/2024- 22/03/2024

During my cloud computing internship at Eduversity, I gained valuable hands-on experience with AWS, Google Cloud, and Firebase. I worked on various projects that enhanced my understanding of cloud technologies and their practical applications. The internship provided me with a solid foundation in cloud computing and prepared me for future roles in the field.

PROJECTS

Pothole detection system using dashcam

In the pothole detection system using dash cams project, I am developing an innovative approach to reduce accidents caused by potholes in India. The system utilizes smartphones with cameras and the YOLO object detection algorithm. By analyzing dash cam footage in real-time, the system can detect potholes on roads and alert drivers, helping to prevent accidents and improve road safety.

Linktree Clone

In my Linktree clone project, I created a simple and user-friendly interface using HTML and CSS. The project allows users to create a landing page with multiple links to their social media profiles, websites, or any other URLs they want to share. The design is responsive, ensuring that the links are easily accessible on both desktop and mobile devices. made a link tree clone and hosted on github
